

## **JFSD**

### **Module 1 Question Bank**

1. Define classes with interfaces. How SOLID principle is applicable to interfaces.
2. Explain briefly the various Collection classes, Interfaces in Java.
3. What is a Stream in Java? Mention the use cases of Stream in collection.
4. Define POJO? How it helps to build a model in a java fullstack application.
5. What is the Collection Framework in Java? Explain the hierarchy of the Collection Framework with a neat diagram.
6. What are the various types of functional interfaces, Explain with Example.
7. What is a Lambda Expression in Java? Explain its uses with examples.
8. What is an Interface in Java? Differentiate between Iterable and Iterator interfaces.
9. What is Java Enumeration? Distinguish between Iteration and Enumeration.
10. What are ArrayList and Vector? Explain their working with a simple example program.
11. What are Stack and Queue? Explain their working with a simple example program.
12. Explain the Java LinkedList class with an example program.
13. Explain briefly about Set and HashSet in Java.
14. Differentiate between List and Set with an example program.
15. Explain TreeSet in Java with an example program.
16. What are HashMap and TreeMap in Java? Explain with example programs.
17. What are Comparable and Comparator interfaces in Java? Give at least five differences between them.
18. Explain Java Lambda Expressions with examples for:
  - No parameter
  - Single parameter
  - Multiple parameters
19. What is JDBC? Explain the four types of JDBC drivers.
20. Explain briefly the important classes and interfaces of JDBC.
21. Explain in detail the five steps of Java Database Connectivity.
